amri.dk@hotmail.com

linkedin.com/in/dorian-

amri-8685a2177

Systems engineer combining aerospace engineering and artificial intelligence. Recent experience in ATR flight-warning analysis, IVVQ and requirements engineering for Naval Group, together with Python, OCR, Machine Learning, Deep Learning, RAG and AI-agent development.

## CORE EXPERTISE

### SYSTEMS & IVVQ

Requirements • traceability • V-cycle • validation

### DATA & AI

Python • ML • DL • RAG • AI agents

### AVIONICS

Flight Warning • Crew Alerting • ATA chapters

### ELECTRONICS

PCB • testing • analogue/digital

## PROFESSIONAL EXPERIENCE

### Avionics Systems Engineer - Flight Warning

AKKODIS | ATR assignment

May 2026 - Present

Permanent contract • Blagnac

- Analysed and consolidated alerting data for ATR 42-600 and ATR 72-600 aircraft, structured by ATA chapter.
- Verified consistency across CAS messages, alert levels, aural warnings, crew procedures and cockpit effects.
- Cross-checked avionics technical documentation and produced structured traceability and synthesis deliverables.
- Contributed to system studies supporting a future aircraft generation.

### Systems IVVQ Engineer

AKKODIS | Naval Group assignment

Mar. 2026 - Apr. 2026

Permanent contract • Toulon

- Drafted and structured system and software requirements for an underwater-drone mission-management application.
- Organised requirements by functional scope in Excel matrices supporting verification and validation activities.
- Contributed to systems engineering and IVVQ activities in a defence environment.

### Apprentice Systems Engineer - MBSE & AI

ALTEN

Oct. 2023 - Oct. 2025

Apprenticeship • Toulouse

- Modelled systems and requirements using SysML, Capella and Cameo; contributed to Smart Requirement Modeling activities.
- Developed Python-based OCR and data-processing pipelines using Hugging Face and Docling.
- Prototyped NLP, RAG and AI-agent solutions to extract, structure and retrieve technical information.

### PCB Test Application Engineer - Apprentice

CONTINENTAL

Sep. 2022 - Aug. 2023

Apprenticeship • Toulouse

- Developed and improved test applications for electronic printed circuit boards.
- Supported test campaigns, analysed anomalies and coordinated with electronics, software and validation teams.
- Maintained technical test documentation and contributed to continuous improvement.

INTERNSHIPS

RAMS Engineering Intern

Sep. 2021 - Mar. 2022

APSYS (Airbus)

Internship • Toulouse

- Contributed to reliability, availability, maintainability and safety analyses for the EGNOS V2 system.
- Supported technical reviews and system-validation documentation.

Electronics Engineering Intern

May 2020 - Aug. 2020

IRAP

Internship • Toulouse

- Defined technical specifications for an electronic board associated with the COPILOT scientific instrument.
- Analysed hardware needs and interfaces within a multidisciplinary scientific team.

EDUCATION

Master's-level programme in Artificial Intelligence & Big Data

2023 - 2025

IA School Toulouse

Engineering curriculum - Embedded Electrical & Electronic Systems

2022 - 2023

CESI Toulouse — one-year apprenticeship

DUT in Physical Measurements

2018 - 2020

IUT Paul Sabatier

Scientific Baccalauréat

2015 - 2018

Lycée Saint-Exupéry

PROJECTS

CNES - Génération ISS

Designed and prepared a scientific experiment intended for the International Space Station. Contributed to the experimental protocol, device reliability, constraint analysis and technical presentation of the project.

Experimental engineering • physical measurements • teamwork

Anomaly detection & clinical decision support

Developed an AI prototype to identify anomalies in patient data, support functional diagnosis and generate personalised physiotherapy recommendations based on detected patterns.

Python • ML/DL • anomaly detection • recommendation
